2 Medical Necessity

Measurement analysis requested: Cervical C.R.M.A. Lumbar C.R.M.A.

Mensuration of diagnostic x-rays is a baseline assessment and is medically necessary in this specific case due to spinal trauma and is needed to help assess:

- Ligament Instability
 - Vertebral Derangement
 - LMSI
 - Help confirm ligament laxity (M24.20)
 - Help determine Frequency and Duration of Care
 - Help determine referral to an appropriate specialist
 - Determine differential diagnosis (which ligament/how severe?)
 - Determine exact Grade/Severity of intersegmental motion abnormality *
- *Mensuration is the only way to assess intersegmental motion abnormality

Documented ICD-9 from daily office notes (supporting diagnosis for medical necessity):

- 847.0 Neck Sprain (S13.4xxA)
- 847.2 Lumbar Sprain (S33.5xxA)
- 739.1 Cervical Subluxation (M99.01)
- 739.3 Lumbar Subluxation (M99.03)
- 718.88 Spinal Instability AtlantoOccipital (M53.2x1)
- 718.88 Cervical Spinal Instability (M53.2x2)
- 718.88 Lumbar Spinal Instability (M53.2x6)
- 839.08 Cervical Segmental Dysfunction from Trauma
- 839.20 Lumbar Segmental Dysfunction from Trauma (M99.13)
- 728.4 Spinal Ligament Laxity (M24.20)
